**CONSENT TO TREATMENT OF MINOR**

**(Fill this out if the patient is under 18 years of age)**

I, \_\_\_\_\_, being the parent and/or legal guardian of \_\_\_\_\_ authorize Dr. Babcock to perform diagnostic tests and render chiropractic adjustments and other treatment to my minor son/daughter. This authorization also extends to all office staff members and is intended to include radiographic examination at the doctor's discretion.

As of this date, I have the legal right to select and authorize health care services for the minor child named above. (If applicable) Under the terms and conditions of my divorce, separation, or other legal authorization, the consent of a spouse/former spouse or other parent is not required.

**Please read each section of this document before signing. It is important you understand the following information. Please ask questions if anything is unclear.**

**\*Please initial to the left of each statement.**

**\_\_\_\_\_ THE NATURE OF THE CHIROPRACTIC ADJUSTMENT**

The primary treatment used by doctors of chiropractic is a chiropractic adjustment. A chiropractic adjustment is designed to reduce vertebral subluxations. Subluxations are spinal vertebrae that are out of position and can cause loss of function. Dr. Babcock will use chiropractic adjustments to treat you. He may use his hands or a mechanical instrument upon your body in such a way as to move your joints. This may cause an audible pop or click much as you have experienced when you crack your knuckles. You may also feel a sense of movement.

**\_\_\_\_\_ ANALYZE / EXAMINATION / TREATMENT**

As part of the analysis, examination, and treatment, one or more of the following procedures will be performed as recommended by Dr. Babcock: Chiropractic Adjustment, Palpation, Vital Signs, Range of Motion Testing, Orthopedic Testing, Basic Neurological Testing, Muscle Strength Testing, Postural Analysis Testing, X-Ray, Ultrasound, Traction, Laser, Hot/Cold Therapy, Electrical Muscle Stim, Other: \_\_\_\_\_

**\*These procedures will be discussed prior to performing them.**

**\_\_\_\_\_ THE RISKS INHERENT IN CHIROPRACTIC**

As with any healthcare procedure, there are complications which may arise during a chiropractic adjustment and therapy. Complications include but are not limited to fractures, disc injuries, dislocations, muscle strains, cervical myelopathy, costovertebral strains/separations, and burns. Some types of adjustments of the neck have been associated with injuries to the arteries in the neck leading to or contributing to serious complications including stroke. Some patients will feel stiffness and soreness following the first few days of treatment. Dr. Babcock will make every reasonable effort during the examination to screen for contraindications to care; however, if you have a condition that would otherwise not come to Dr. Babcock's attention, it is your responsibility to inform him.

**\_\_\_\_\_ THE PROBABILITY OF THOSE RISKS OCCURRING**

Fractures are rare occurrences and generally result from underlying weakness of the bone which we check during the taking of your history and examination and X-Ray (if necessary). Stroke and/or arterial dissection caused by chiropractic adjustment of the neck has been the subject of ongoing medical research and debate. The most current research on the topic is inconclusive as to a specific incident of this complication occurring. If there is a casual relationship at all, it is extremely rare and remote. Unfortunately, there is no recognized screening procedure to identify patients with neck pain who are at risk of arterial stroke.

**\_\_\_\_\_ THE AVAILABILITY AND NATURE OF OTHER TREATMENT OPTIONS**

Other treatment options for your condition may include self-administered, over-the-counter analgesics and rest, medical care and prescription drugs such as anti-inflammatory, muscle relaxants, and pain-killers, hospitalization, and surgery. If you choose to use one of the other treatment options, there are risks and benefits of such options and you can discuss these with your primary care physician.

**\_\_\_\_\_ THE RISKS AND DANGERS ATTENDANT TO REMAINING UNTREATED**

Remaining untreated may allow the formation of adhesions and reduce mobility which may set up a pain reaction. This process may complicate treatment, making it more difficult and less effective the longer it is postponed.

**I have read or have had read to me the information above. I have had my questions answered to my satisfaction. By signing below, I have weighed the risks involved and hereby give my consent to treatment.**
